PROFESSIONAL SUMMARY

Software Engineer with a B.Tech in Artificial Intelligence & Data Science, AWS Academy training in Cloud Foundations and Generative AI Foundations, and a 6-month Python with AI & ML internship, where I independently designed and deployed 2 full-stack web applications using Python, Java, Flask, and SQL. Proficient in RESTful API development, relational database design, authentication systems, and object-oriented programming. Strong foundation in data structures, algorithms, and debugging, with proven ability to build production-style backend systems from requirements to deployment.

EDUCATION

B.Tech, Artificial Intelligence & Data Science *2022 – 2026*
Muthayammal Engineering College (Autonomous), Rasipuram — Anna University | CGPA: 7.64 / 10

Intermediate (MPC) *2020 – 2022*
Narayana Junior College, Gudur — BIEAP State Board | 75.4%

High School (SSC) *2020*
Narayana E-Techno School, Gudur — BSEAP State Board | 96%

INTERNSHIP

Python with AI & ML Intern | SSB Training and Placement Pvt Ltd, Visakhapatnam *Dec 2025 – Jun 2026 (6 Months)*

- Completed a structured 6-month internship in Python with AI & ML, covering Machine Learning Fundamentals, Python programming, and data-driven application development.
- Applied internship training as part of a 3-member team to design, build, and deploy the AI-Based Coding Platform (see Projects), applying Python and AI & ML concepts to a working, production-style application.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, SQL
Cloud & AI (AWS Academy): Core AWS services, cloud architecture fundamentals, generative AI concepts & applications
Web Technologies: Flask, RESTful API Development, HTML5, CSS3, Bootstrap
Databases: MySQL, SQLite, Relational Database Design
Tools & Platforms: Git, VS Code, Postman (API Testing), MS Excel (Pivot Tables, VLOOKUP, Charts)
Core Concepts: Data Structures & Algorithms, OOP, Machine Learning Fundamentals, Authentication & Authorization, Debugging, SDLC, Team Collaboration
Libraries: NumPy, Pandas, Matplotlib, Seaborn

PROJECTS

AI-Based Coding Platform | Flask Backend Developer (Team Project) *Python, Flask, SQLite, HTML, CSS*

- Collaborated with a 3-member team to replace manual, slow code review with a platform for real-time code evaluation.
- Owned the backend: implemented secure authentication and role-based access control (admin/user), a problem-management module with custom test-case validation, and a multi-language code execution engine with automated result verification.
- Delivered a fully functional platform that automated the entire evaluation workflow, replacing manual grading with instant, reliable feedback.

Smart Service Booking & Management System | Flask Backend Developer *Python, Flask, SQLite, HTML, CSS, Bootstrap*

- Digitized a manual, offline service-booking process into a secure, real-time backend system.
- Designed and built RESTful APIs for authentication, service management, and booking workflows across 3 user roles (admin, service provider, customer); implemented password encryption and automated Flask-Mail notifications.
- Delivered a scalable, modular backend with optimized database queries — a reliable, production-ready service-booking system supporting multiple concurrent user roles.

CERTIFICATIONS

AWS Academy Graduate — Cloud Foundations | 20 course hours | Issued 09/03/2024
Verify: credly.com/go/Mh8CQO0n

AWS Academy Graduate — Generative AI Foundations | 12 course hours | Issued 09/22/2025
Verify: credly.com/badges/006347e3-b0c2-4b7e-8e74-ee17e98fd7c4

- Foundations of Cloud IoT Edge ML — NPTEL
- Distributed Systems — NPTEL

KEY STRENGTHS

- Self-directed learner who built and deployed 2 full-stack projects — independently and as part of a 3-member team.
- Clear technical communicator, reliable under deadlines, with disciplined task and time management.
